                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   H_RAT
                                                                            SIMILARITY)

-!- SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-!- TISSUE SPECIFICITY: EXPRESSED IN THE NODE, NOTOCHORD, FLOOR PLATE, AND POSTERIOR LIMB BUD MESENCHYME.

-!- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTECLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation between the Swiss Institute of Bioinformatics are no restrictions on in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE MEWLY GENERATED N-TERMINAL FRACKENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDITATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED IN THE VENTRAL MIDLINE OF THE NEURAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TUBE AND BRAIN. IN THE DEVELOPING BRAIN, EXPRESSION OCCURS IN DOMAINS THAT INCLUDE A DISCRETE REGION IN THE FLOOR OF THE DIENCEPHALON. NOT DETECTED IN THE NOTICHORD OR DEVELOPING FIN BUTTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: INTERCELLULAR SIGNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT. RESULT 13
-I- SUBCLIULAR INCANION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

-I- TISSUE SPECIFICITY: EXPRESSED EXCLUSIVELY IN THE NOTOCHORD.
-I- DEVELOPMENTAL STAGE: FIRST DETECTABLE AT THE MID-GASTRULA STAGE.
DISAPPEARS AT THE END OF THE SOMITOGENESIS.
-I- PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTECLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HES NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                      15-JUL-1999 (Rel. 38, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                     AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED NOT TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-RANGE SIGNALING, WHEREAS THE C-PRODUCT HAS NO SIGNALING ACTIVITY (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: INTERCELLULÂR SIĞNAL ESSENTIAL FOR A VARIETY OF PATTERNING EVENTS DURING DEVELOPMENT. MAX FUNCTION AS A SPERMATOCYTE SURVIVAL FACTOR IN THE TESTES. ESSENTIAL FOR TESTE DEVELOPMENT.

SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

TISSUE SPECIFICITY: EXPRESSED IN ADULT TESTES. NOT EXPRESSED IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LIMB BUDS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   62
                                         SUBCELLULAR LOCATION: THE C-TERMINAL PEPTIDE DIFFUSES FROM THE CELL, WHILE THE N-TERMINAL PEPTIDE REMAINS ASSOCIATED WITH THE CELL SURFACE. IS ALSO SECRETED IN EITHER CLEAVED OR UNCLEAVED FORM TO MEDIATE SIGNALING TO OTHER CELLS (BY SIMILARITY).

PTM: THE C-TERMINAL DOMAIN DISPLAYS AN AUTOPROTEOLYSIS ACTIVITY AND A CHOLESTEROL TRANSFERASE ACTIVITY. BOTH ACTIVITIES RESULT IN THE CLEAVAGE OF THE FULL-LENGTH PROTEIN AND COVALENT ATTACHMENT OF A CHOLESTEROL MOIETY TO THE C-TERMINAL OF THE NEWLY GENERATED N-TERMINAL FRAGMENT (N-PRODUCT). THIS COVALENT MODIFICATION APPEARS TO "PLAY AN ESSENTIAL ROLE IN RESTRICTING THE SPATIAL DISTRIBUTION OF THE PROTEIN ACTIVITY TO THE CELL SURFACE. THE N-PRODUCT IS THE ACTIVE SPECIES IN BOTH LOCAL AND LONG-BANGE SIGNALING, WHEREAS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3 PARLRPRIHECLVLLLLLVVPAAWGCGPGR-VVGSRRRPPRKLVPLAYKQFSPNVPEKTL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                      419.8

Patent No. 5844079
GENERAL INFORMATION:
APPLICANT: Ingham, Phillip W.
APPLICANT: McMahon, Andrew P.
APPLICANT: Tabin, Clifford J.
TITLE OF INVENTION: Vertebrate Embryonic Pattern-Inducing
TITLE OF INVENTION: Proteins and Uses Related Thereto
NUMBER OF SEQUENCES: 47
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD
COUNTRY: USA
ZIP: 02109
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
                                                                                                                                                                                                                                                                                                                                                                                                                                                         1043
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        983
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      941
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      926
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     881

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PS This nuclectide sequence comprises a coding region for the human
CC Desert hedgehog protein Dhh (see V05517). The invention relates to
CC a method for modulating the formation and/or maintenance of muscle
CC tissue by ecotopically contacting muscle cells, especially muscle
CC tissue by ecotopically contacting muscle cells, especially muscle
CC tissue by ecotopically contacting muscle cells, especially muscle
CC termyrogenitor cells, in vitro or in vivo, with a hedgehog
CC constructs) or ptc therapeutic (i.e. a small organic molecule that
CC minics the effect of hedgehog proteins on patched signalling, or
CC constructs) or ptc therapeutic or filesorders of, or surgical or
CC activates or potentiates patched signalling) in an amount effective
CC to alter the growth state of the treated cells. Also claimed is a
CC method for treatment or prevention of disorders of, or surgical or
CC cosmetic repair of, such muscle tissues, by administering a
CC muscle atrophy, in particular skeletal muscle atrophy or cardiac
CC muscle atrophy, cachexia, or muscular myopathy (all claimed). The
CC myoblastic growth of muscle tissue such as in myoblastic or
CC mostle atrophy competitie or ptc therapeutic can inhibit growth of
CC myoblastic growth of muscle tissue such as in myoblastic sarcoma
CC (also claimed). The hedgehog therapeutic preferably comprises at
CC (claim and bioactive extracellular portion of a hedgehog protein (see
CC vossiol-19) encoded by a vertebrate hedgehog gene (see X25098-107),
CC especially a human hedgehog gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This cDNA sequence codes for a precursor (see W79595) of a novel human Desert hedgehog protein (see also W79593). Human Desert hedgehog protein DNA (HuDHH) was originally identified following screenings of human cell lines by PCR using primers (see V62402-03) based on the mouse Desert hedgehog gene. These screenings indicated that the ARH-77 (ATCC CRL-1621) cell line, which is derived from the plasma cell of a leukaemia patient, expressed a specific gene at an elevated level. Sequencing confirmed it to be a novel human gene showing homology to the mouse Desert hedgehog gene. DNA encoding N-terminal sequences (see V62397) was obtained by further PCR amplifications (see V62404-06). The invention provides Desert hedgehog polynucleotides and protein, a monoclonal antibody (MAb) that recognises the protein protein, and a method for detecting the protein using the MAb. The hedgehog protein, DNA and MAb can be used to elucidate treatments and diagnoses.

This cDNA sequence codes for a precursor (see W79594) of a novel This cDNA sequence codes for a precursor (see W79594) of a novel human Desert hedgehog protein (see also W79593). Human Desert hedgehog protein DNA (HuDHH) was originally identified following screenings of human cell lines by PCR using primers (see V62402-03) based on the mouse Desert hedgehog gene. These screenings

Sequencing confirmed it to be a novel human gene showing homology to the mouse Desert hedgehog gene. DNA encoding C-terminal sequences (see V62398) was obtained by further PCR amplifications (see V62407-08). The invention provides Desert hedgehog polynucleotides and protein, a monoclonal antibody (MAD) that recognises the protein, a process for producing the protein, and a method for detecting the protein using the MAD. The hedgehog protein, DNA and MAD can be used to elucidate hereditary morphological abnormalities in humans to establish their treatments and diagnoses.

CC This nucleotide sequence comprises a coding region for the mouse CC Desert hedgehog protein Dhh (see Y05511). The invention relates to CC a method for modulating the formation and/or maintenance of muscle CC tissue by ecotopically contacting muscle cells, especially muscle CC tissue by ecotopically contacting muscle cells, especially muscle CC constructs) or ptc therapeutic (i.e. a small organic molecule that CC mimics the effect of hedgehog polypeptides and gene therapy CC constructs or potentiates patched signalling) in an amount effective to alter the growth state of the treated cells. Also claimed is a CC method for treatment or prevention of disorders of, or surgical or CC cosmetic repair of, such muscle tissues; by administering a hedgehog polypeptide or ptc therapeutic. The disorder may be CC muscle atrophy, cachexia, or muscular myopathy (all claimed). The compoblastic growth of muscle tissue to provide treatment of hyperblastic or cc neoplastic growth of muscle tissue such as in myoblastic sarcoma (also claimed). The hedgehog therapeutic preferably comprises at CC (also claimed). The hedgehog therapeutic preferably comprises at CC (also claimed). The hedgehog therapeutic preferably comprises at CC (constitute extracellular portion of a hedgehog protein (see CC 905510-19) encoded by a vertebrate hedgehog gene (see X25098-107), CC especially a human hedgehog gene.

Claim 5; Page 135-37; 210pp; English.

Claim 5; Page 135-37; 210pp; English.

The sequence encodes a mouse desert hedgehog protein, homologous to a Drosophila hedgehog protein (R77337), and has been isolated by tow stringency screening of a mouse genome DNA library, in phage laws and the sequence contains 3 homologous regions, encoding a claim open reading frame interrupted by introns. Splicing has confirmed by polymerase chain reaction amplification of first strand cDNA generated from adult testicle RNA. Probes and primers derived from hedgehog sequences may be used as diagnostic agents.

C and the gene may also be used in gene therapy. Antibodies generated from the encoded protein may be used as therapeutic or research reagents.

Represent the freetheat and prevention of e.g.

conditions - is used for the treatment and prevention of e.g.

per cerebral infarction, stroke and transient ischaemic attacks

per cerebral infarction, stroke and transient ischaemic attacks

per cerebral infarction, stroke and transient ischaemic attacks

per lischaemic or epoxic conditions by administering a ptc (patched)

CC A method has been developed for limiting the damage to neuronal cells by

cischaemic or epoxic conditions by administering a ptc (patched)

CC neuronal cells can also be limited by administering a gene activation

cc construct which recombines with the genomic hedgehog gene to provide a

cc gene. Administration of the ptc therapeutic agent is used to protect

cc gene. Administration of the ptc therapeutic agent is used to protect

cc cerebral tissues against ischaemic injury; to treat cerebral infarct or

cischaemia, stroke (thrombolic or embolic) and transient ischaemic

cinjury to the brain or spinal cord, oedema caused by trauma, haemorrhage

and encephalomyelitis, or in conjunction with (coronary bypass) surgery.

Treatment (which may be prophylactic) is used where ischaemic/epoxic

conditions may cause cerebral hypoxia, or progressive loss of neurons

due to oxygen depletion, including in patients with hypotension. The

treatment reduces CIV by at least 25, particularly at least 70,8. The

present sequence encodes a hedgehog sequence given in the present

convenience 1100 BB. — 104 A. 371 C. 300 C. 305 M.
